To Whom It May Concern:

I am writing regarding Stanwyck Avionics and the current installation of our AWOS at the Wellsboro Johnston Airport.

Both William Stanwyck, Jr. and William Stanwyck, III completed the installation of the electronic equipment for the AWOS at Wellsboro Johnston Airport. The Stanwyck's were very punctual; they were here on the job when they stated that they would be. All equipment was unpacked and ready to be installed, they explained the equipment and how it was interconnected. I could tell they were very meticulous at their work. They were very professional and all installations were very neatly performed, excellent housekeeping skills not leaving me to clean up the opened boxes, or any garbage

The installation work the Stanwyck's completed was to perfection and I had no problem with any of their work. There was some misunderstanding about the painting of the tower, as I was told that the general contractor was responsible for the paint touchup of the tower and the general contractor told me this also.

Even though they were taken off the agreement as the company to complete the maintenance contract of the AWOS, they continue to keep in touch either by email or phone calls to see how things are going and if there are any problems.

The only problem that was encountered was the AWOS VPN network issue, Stanwyck's were on the phone with AWI and were not able to get the router set up, but I don't feel that was any fault of theirs.

Wellsboro Johnston Airport appreciates the Stanwycks and Stanwyck Avionics as they are very competent. I would highly recommend them for their installations and maintenance.

Sincerely,

Craig A. Musser  
Airport Manager
